Re: File 2119.1143 RMB VMF
Univeristy if California, Richmond Field Station
UPDATE

Our consultant Jonas and Associates has just completed sampling efforts at the Richmond Field Station around the former mercury fulmanate facility. This facility was operated by the California Cap Company prior to university ownership. The results show that mercury contamination is fairly localized and has not contaminated any groundwater. A full report will be sent in two weeks.

Please feel free to call for any additional information. Berney Acdrada of your office has been kept informed of our efforts over the past few years and can also answer any questions you might have.

Thank you.
