Governor

### **DTSC Special Update** **South Richmond Shoreline Sites** September 28, 2006

#### **Zeneca/Stauffer Chemical Site –**

Between October 2 and October 15, 2006 grading work will be taking place on the western end of East Stege Marsh, and in an area between the Upper and Lower Lagoons. The work is necessary to fix the grade in East Stege Marsh, and to repair ruts that have developed. It is expected that the grading operations will take 2 to 3 days and will require the use of a grader and water truck for dust control. The grading work will only involve sediments that were brought in as backfill material. Real Time air monitoring for total dust and hydrogen sulfide will be conducted while the work is occurring. In addition, a biologist will be present to ensure that the activities do not harm wildlife. The work is consistent with the existing permits for the site and the U.S. Army Corps of Engineers and the Bay Conservation and Development Commission (BCDC) will be notified prior to the work occurring.
